King Mongkut's University of Technology Thonburi

Mid-term Examination

Semester 2/2014

1

Seat NO

MEE 224 Thermal Engineering

Credits 3

Department of Control system and Instrumentation Engineering

23 February 2015

13:00 - 16:00

Note: 1. You are not allowed to bring lecture notes and any other texts to the examination room.

- 2. Calculators are permitted.
- 3. Answer all six questions.
- 4. If you have any doubt that the given information does not clarify, you may assume.
- 5. Tables of thermodynamic properties are provided.

Dr. Wanchai Asvapoositkul

Basic Principle Formulations

Simple Compressible Closed System:

Conservation of mass:

 $m_1 = m_2$

Conservation of energy:

 $Q = U_2 - U_1 + W$

Mechanical work of simple compressible system: $W = \int p \, d\forall$

Open system, Steady Flow: one inlet, one outlet

Conservation of mass:

 $m'_i = m'_e = \rho_i A_i \overline{v_i} = \rho_e A_e \overline{v_e}$

Conservation of energy:

 $q - w = h_e - h_i + \left(\frac{v_e^2 - v_i^2}{2}\right) + g(z_e - z_i)$

Properties of pure substances:

Specific heats:

$$c_v = \left(\frac{\partial u}{\partial T}\right)_v$$
 and $c_p = \left(\frac{\partial h}{\partial T}\right)_p$

for ideal gases: $c_p - c_v = R$ and $k = \frac{c_p}{c}$

An ideal gas law:

 $p \forall = mRT$

The specific volume of the mixture (liquid and vapor): $v = v_f + x (v_g - v_f)$

An ideal gas equation of state:

$$\frac{p_1 v_1}{T_1} = \frac{p_2 v_2}{T_2}$$

Polytropic processes of an ideal gas:

 $pv^n = constant$

Enthalpy

h = u + p v

 $du = c_v dT$, $dh = c_p dT$

The gas constant of air is $R = 0.287 \text{ kPa m}^3/\text{kg K}$

Specific heat of water (c_p) at room temperature = 4.18 kJ/kg·K

Name:	Student ID
1.2 What is a system in thermodynamics? (4 marks) Answer:	
1.3 What is the zeroth law of thermodynamics? (4 marks Answer:	3)
1.4 What is the first law of thermodynamics? (4 marks) Answer:	

1.5 Define the energy, heat, and work in thermodynamics. (4 marks) Answer:

Name:	Student ID
-------	------------

2.1 Complete the following table for water: (15 marks)

T, °C	P, kPa	h, kJ/kg	$v, m^3/kg$	x	Phase description
100	200				
130				0.5	
	1000	3176.6			
	800		0.07244		
	500			0	

2.2 Determine the total external energy of an airplane mass of 1,000 kg and flying 2,000 m above the ground at a speed of 540 km/h. (5 marks)

Name:	Student ID

3.1 In Fig 1, water in the vessel is heated at atmospheric pressure. Determine the phase of the water at each location as indicated in the figure. (5 marks)

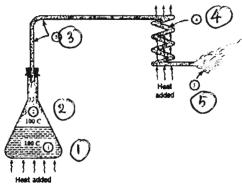

Fig. 1

	* *B* *
Ans.	
Point 1: the phase of the water	is
Point 2: the phase of the water	is
Point 3: the phase of the water	is
Point 4: the phase of the water	is
Point 5: the phase of the water	is

3.2 A resistance heater is immersed in a beaker (mass 50 g, specific heat 0.85 kJ/(kg-K)) containing 500 g of water at 30°C. What is the minimum time required to turn on and pass a current of 5 A from a 220-V source in order to evaporate all the water?

Assume that the beaker is well insulated and that the increase in the internal energy of the resistor is negligible in comparison with the increases in the internal energies of the water and the beaker. (15 marks)

Name:	Student ID
1 MILLO	Student ID

4.1 Suppose we consider the human body as a system and apply the first law of thermodynamics to it. We know that over any given period of sufficient length (say one day), there will be a net heat flow from the body (i.e. *Q* is negative) and the body will do some external work on its surroundings. Explain how (and in what form) energy is added to the body to balance the continual decrease due to heat flow from the body and work being done by the body. (10 marks)

Ans.

4.2 Suppose the average daily heat production of a person weighing 75 kg is 10⁷ J; calculate the rise in body temperature which would occur over one day if the body had no way of disposing of this heat.

Assume that the specific heat of the human body is the same as the specific heat of water. Can you give a reason to support this assumption? (10 marks)

Name:	Student ID
Name:	Student ID

5. Compare the work done by a gas expansion of an initial pressure of 150 kPa and an initial volume of 100 L to a volume of 200 L in (a) a constant pressure process, (b) an isothermal process, and (c) an adiabatic process with n=1.40 (e.g. $pV^n=$ constant). Also sketch the processes on the P- v diagram. (20 marks) Ans.

P

Name:	Student ID.
1 1411101	Student ID

6. Consider an ordinary shower where hot water at 60 °C is mixed with cold water at 10 °C. If it is desired that a steady stream of warm water at 45 °C be supplied, determine the ratio of the mass flow rates of the hot to cold water. Assume the heat losses from the mixing chamber to be negligible and the mixing to take place at a pressure of 0.12 MPa. (20 marks)

Source: Tables A-4 through A-8 are generated using the Engineering Equation Solver (EES) software developed by S. A. Klein and F. L. Alvarado. The routine used in calculations is the highly accurate Steam_IAPWS, which incorporates the 1995 Formulation for the Thermodynamic Properties of Ordinary Water Substance for General and Scientific Use, issued by The International Association for the Properties of Water and Steam (IAPWS). This formulation replaces the 1984 formulation of Haar, Gallagher, and Kell (NBS/NRC Steam Tables, Hemisphere Publishing Co., 1984), which is also available in EES as the routine STEAM. The new formulation is based on the correlations of Saul and Wagner (J. Phys. Chem. Ref. Data, 16, 893, 1987) with modifications to adjust to the International Temperature Scale of 1990. The modifications are described by Wagner and Pruss (J. Phys. Chem. Ref. Data, 22, 783, 1993). The properties of ice are based on Hyland and Wexler, "Formulations for the Thermodynamic Properties of the Saturated Phases of H₂O from 173.15 K to 473.15 K," ASHRAE Trans., Part 2A, Paper 2793, 1983.

892 I Thermodynamics
